FICTIONAL TEST DOCUMENT - NOT A REAL RESEARCH PAPER

Keywords: electric vehicles; purchase intention; theory of planned behaviour; India

Abstract

This is a FICTIONAL document generated to test software. It is not a real study. The purpose of this study is to examine the factors that influence purchase intention for electric vehicles. Data were collected from 412 respondents in India using a structured questionnaire.

1. Introduction

Little is known about how subjective norms shape EV adoption in tier-2 cities. This study uses the theory of planned behaviour (TPB) as its framework.

2. Research objectives

To examine the effect of attitude, subjective norms and perceived behavioural control on purchase intention.

3. Methodology

A cross-sectional survey design was adopted. Convenience sampling was used to recruit car owners in Delhi and Pune. The final sample of 412 usable responses was analysed with PLS-SEM in SmartPLS. Cronbach's alpha was used to assess reliability.

4. Results

The results show that attitude has a significant positive effect on purchase intention. Subjective norms were found to have a weaker effect. Attitude, subjective norms and perceived behavioural control are the independent variables and purchase intention is the dependent variable.

5. Conclusion

Attitude is the strongest predictor of purchase intention in this fictional dataset.

6. Limitations and future research

Future research should use longitudinal designs and examine charging infrastructure as a moderator.
